Summary

Backend-focused Software Engineer with hands-on experience designing, building, and scaling production-grade APIs and distributed systems. Strong in backend development with Node.js and Python, cloud infrastructure (AWS/Azure), databases, caching, and system design. Proven ability to own services end-to-end, reason about performance, and ship real-world systems used by real users.

Education

Graphic Era Hill University

Bachelor of Technology in Computer Science Engineering, SGPA: 8.2/10.0

Oct 2022 – Jun 2026

Uttarakhand, India

Professional Experience

City Future Lab, IIT Kharagpur

Full Stack Developer Intern

Sept 2025 – Oct 2025

Remote

- Designed and delivered backend services powering a cloud-based geospatial dashboard using Next.js and Node.js, reducing data load latency by **30%**.
- Owned backend workflows including API integration, authentication, data persistence, and deployment, working across the full SDLC in an Agile environment.
- Implemented secure backend pipelines using Firebase Auth, Firestore, and Cloud Storage with CI/CD automation, improving deployment reliability and operational visibility.

GreenFuelEnergy

Frontend Developer Intern

Feb 2025 – Jul 2025

Remote

- Built and shipped a production-grade enterprise platform used by **200+ concurrent users**, collaborating closely with backend services and APIs.
- Integrated OAuth2 and JWT-based authentication with role-based access control, maintaining **99.9% uptime**.
- Owned features end-to-end, including implementation, backend coordination, deployment, monitoring, and post-release fixes in a fast-paced startup environment.

Technical Projects

PostBoy - AI-Powered API Testing Platform | *Next.js 15, PostgreSQL, Google Gemini* | [Live](#) | [GitHub](#)

Jul 2025

- Built a **developer-facing backend platform** for API testing and validation, supporting real-time WebSocket-based execution and AI-assisted request generation.
- Designed backend data flows using **PostgreSQL and Prisma ORM**, handling authentication, request storage, execution history, and environment management.
- Implemented structured error handling, request isolation, and logging to improve reliability and debugging under concurrent usage.

Spotify Clone - Microservices Architecture | *Node.js, AWS EC2, MongoDB, Redis, PM2* | [GitHub](#)

Jun 2025

- Designed and deployed fault-tolerant backend microservices on **AWS EC2**, capable of handling **5000+ concurrent requests** under **200ms latency**.
- Used Redis as a caching layer to reduce database load by **60%**, improving overall system throughput.
- Reasoned about scaling, service isolation, and failure handling using process managers (PM2), health checks, and horizontal scaling principles.

Synapse - Enterprise Hackathon Platform | *Next.js, Node.js, Azure SQL, MongoDB, JWT* | [Live](#) | [GitHub](#)

Aug 2025

- Architected a multi-tier backend system using a hybrid database approach (**Azure SQL + MongoDB**), balancing transactional consistency with flexible data models.
- Deployed backend services on Azure App Service, processing **1000+ API requests/minute** with high availability.

Technical Skills

Backend: Node.js, Express.js, NestJS, REST APIs, Authentication, Microservices, Basic Distributed Systems Concepts

Programming Languages: Python, JavaScript, TypeScript, Java, SQL

Databases & Caching: PostgreSQL, MongoDB, Redis, MySQL, Azure SQL

Cloud & DevOps: AWS (EC2, S3), Azure App Service, CI/CD Pipelines, Docker (Basic), NGINX, Linux

Frontend: React.js, Next.js, Tailwind CSS

Leadership & Achievements

- Technical Workshop Leader:** Conducted Git/GitHub workshop for 100+ students, improving version control.
- Open Source Contributor:** Active contributor to React and Next.js ecosystem with 20+ GitHub stars across projects.
- Freelance Developer:** Built and delivered multiple end-to-end web products for clients, handling complete lifecycle from UI/UX design to deployment.
